PRESS RELEASE

FOR IMMEDIATE RELEASE:

TruSheen Company, Inc. Continues to Add New Distributors and Agents

August 12, 2009 – Henderson, Nevada – Following its first U.S. introduction and demonstration of a line of surface protection products in Henderson, Nevada on July 16, 2009, TruSheen Company, Inc. continues to generate interest from businesses and entrepreneurs anxious to be part of the company and expand their capabilities.

Attendees of the event were introduced to the company’s product line that included the **TruSheen Surface Treatment**, a permanent treatment that protects glass, tile, solar panels, automotive and marine windshields from hard water deposits, snow, and ice - to name just a few.

The highlight of the demonstration was the introduction of **TruSheen UV**. This product is poised to revolutionize the green build industry by creating a barrier against harmful Ultra Violet (UV) and Infrared (IR) rays; improving the energy efficiency of windows. This Nano-technology treatment gives single-pane windows the energy efficiency benefits of dual-paned windows.

Following the event, Spark View Corporation, located in New York, signed an exclusive Distributor Agreement for New York, New Jersey, Rhode Island and Connecticut. Spark View Corporation is a commercial building maintenance company with many recognizable New York skyline buildings as customers. “We have a problem with the material that many of the buildings are made leaching onto the windows. Previously, the only way to effectively remove the limescale on the windows has been to use an acid wash. The application of the TruSheen Surface Treatment has completely eliminated the problem,” stated Patricio Cuesta, President/Owner of Spark View Corporation.

Joining TruSheen as an Independent Agent is Michael Metz, President of Minnkota Energy Solutions located in Minneapolis, Minnesota. Minnkota offers solutions to reduce or eliminate dependence on non-renewable energy sources and utilities. “TruSheen products are a great fit with the rest of our energy-efficient, renewable product offerings,” stated Mr. Metz.

“We are truly excited with the additions of these two companies to the TruSheen distribution family,” stated Clifford Sutton, CEO and founder of TruSheen Company, Inc. “Both of these companies demonstrate the kind of forward thinking needed in the marketplace today.”

TruSheen Company, Inc. produces products that protect and prevent damage to surfaces from outside elements – extending the life of equipment, improving energy efficiency, and reducing costly maintenance, replacement, or repair. For more information, visit www.TruSheen.com.
